

From ALEX² to ALEX³

Optimisation of the ALEX Allergy Xplorer

Mainz, 30 June 2026

Dear colleagues,
dear members of the medical practice team,

we are pleased to inform you that, as of **1 July 2026**, the ALEX² Multiplex Allergy Test will be replaced by the optimised ALEX³ (2431).

The new ALEX³ IgE Allergen Profile, performed from a single serum sample, offers the following **advantages** over the previous ALEX² test:

- Inclusion of numerous new molecular allergen components (218 versus 178 components)
- Removal of non-relevant and cross-reactive allergens
- Inclusion of additional clinically relevant allergens (300 versus 295 in total), including alpha-Gal for the detection of sensitisation associated with delayed red meat allergy (alpha-Gal syndrome)

Further information can be found in the **laboratory information „ALEX³: Molecular Allergy Diagnostics Using Multiplex Technology“** (LIN0075EN). An overview of the 300 allergen extracts and molecular components included in the test is available in the **practice information „ALEX³ Allergen List“** (PRA0071), both of which are available here: <https://www.ganzimmun.de/en/service/download-hub>.

We are delighted to be able to offer you this enhanced testing option.

Do you have any questions or would you like to order sampling materials?

Our customer service team will be happy to help you via email at info@ganzimmun.de or by phone on +49 6131 7205-0, Monday to Friday between 8 a.m. and 7 p.m.

With collegial regards

Dr. med. Patrik Zickgraf
Medical Director
